

Scottish Enterprise Life Sciences Awards 2013

Best New Life Science Company in Scotland – i2eye Diagnostics Ltd

Having developed the world's first visual field analyser for patient groups whose visual field was previously impossible to test, i2eye is targeting an immediate market estimated at £500 million and looking to exploit further market potential of £15 billion.

The company has already started shipping products to customers less than ten months after starting commercial operations.

i2eye Diagnostics Ltd is a Scottish Enterprise High Growth Support Unit assisted company and is one of 12 companies that won a Scottish Enterprise supported place on the prestigious Entrepreneurship Development Programme at the Massachusetts Institute of Technology in Boston.

i2eye's chief executive was on the winning pitching team last week from a cohort of over 100 chief executives from around the world.

Peter Estibeiro, i2eye's chief executive said "I'm very proud of all we have achieved in the last year, it would not have been possible without the dedication of my colleagues in the company and the support we've received from Scottish Enterprise, the Edinburgh BioQuarter and our investors led by Kelvin Capital. We are absolutely delighted to have been chosen as best new company."
